

Guess My Number

To play this game, the parent writes down a number between 11-30. Have your child guess what your number is. Give them hints using “greater than” or “less than” to help them along the way. For example, if your number is 19 and your child says 16, you could say “My number is greater than 16.” Use the number line below to help your child refine their answer. You can use 2 Post-Its or pieces of paper to cover any numbers that have been ruled out.
